INCDTP, Romania |
| 17.20 | The SESEC legacy and the new action SET | EURATEX, Partners |
| 17.45 | Networking cocktail | |
| 18.30 | Dinner | |

Efficiency and competitiveness of more of the 170.000 European textile and clothing companies must take into account the current, and future, **energy challenges**.

Energy efficiency in clothing and (partially also) textile manufacturing is already supported in eight EU Member States by the **SESEC** project which comes to a contractual end in September 2014. The new project **SET** will take up the SESEC legacy, addressing obligations and incentives and it will seek to support over 150 European companies until 2016.

The relevant policy framework, the SESEC's impact and finally insights of the new actions will be presented in Brussels on 17th September 2014.

The event is part of the Energy Made-to-Measure information campaign promoted by EURATEX.

Energy Made-to-Measure

ENERGY EFFICIENCY
IN THE EUROPEAN TEXTILE-CLOTHING
INDUSTRY

Co-funded by the Intelligent Energy Europe
